

Product Description

The Type LCT-01 Load Cell Tester is a hand-held, easy-to-use device for load cell testing and error detection in load cell weighing systems.

The load cell can be tested without being removed from the weighing system.

The operation is menu driven. The test is completely automatic, the test results are available on the display.

The following characteristics are measured:

Input Resistance, Output Resistance and Insulation Resistance ($\geq 10 \text{ M}\Omega$) as well as the Zero Balance of the load cell with indication of the actual load in % of Maximum Capacity.

For all technicians in the weighing- and/or process industry the LCT-01 is a very important device.

Key Features

- Load cell test and insulation test by measuring resistance
- Measurement of load cell output signal for checking linearity and load distribution
- Rugged plastic housing
- Uses standard batteries type AA
